

# sanimal.com

SAnimal is a blockchain based application for recording a pet's history from birth to death, effectively keeping pets safe, and their owners sane.

SAnimal provides a safe, secure, and convenient way to provide ownership between pets and their pet owners by allowing important life events and ownership transfers to be represented in a pet's unique 'block'. Our environmentally friendly approach allows for blockchains to be deleted after a pet's proof of death, and for owners to own multiple pets (and their 'blocks') on one chain. By providing true ownership, SAnimal hopes to reduce the number of homeless pets and provide responsibility to those who abuse pet ownership.

## PERSONAS

### Animal Shelter Employee

Provides and relinquishes pet ownership, while also updating and maintaining a pet without ownership and its records. Can certify proof of death and require a blockchain registration before adoption. They need to see reasons that this is important, such as keeping animals out of the shelter system in the long run and providing responsibility to those who abuse the system.

### Pet Owner

Provides and relinquishes pet ownership, while also updating and maintaining a pet without ownership and its records. Can certify proof of death and require a blockchain registration before adoption. They need to see reasons that this is important, such as keeping animals out of the shelter system in the long run and providing responsibility to those who abuse the system.
